Risk Profiles (for more information please see the last 2 pages of this document)	Client 1 - Which of these "common risk profiles" best describe you as an investor? (Tick the options that applies)	Client 2 - Which of these "common risk profiles" best describe you as an investor? (Tick the options that applies)
Conservative The Conservative risk profile is designed for investors with a minimum two-year timeframe or those that seek a portfolio invested predominantly in interest bearing assets, with a small proportion of growth assets. This portfolio also suits investors who give a high priority to the preservation of capital (while understanding loss is still possible) and are therefore willing to accept lower potential investment performance, hence the 85 percent exposure to defensive assets (cash and fixed interest).		
Moderate The Moderate risk profile is designed for investors with a minimum three-year timeframe or those who seek a diversified portfolio of interest bearing and growth asset classes, with an emphasis on interest bearing assets. This portfolio also suits investors seeking a lower level of investment value volatility, and therefore willing to accept lower potential investment performance, hence the 70 percent exposure to defensive assets (cash and fixed interest)..		
Balanced The Balanced risk profile is designed for investors with a minimum five-year timeframe. This portfolio also suits investors who desire a modest level of capital stability but are willing to accept moderate investment value volatility in return for commensurate potential investment performance, hence the 50 percent exposure to growth assets (shares, listed property and infrastructure) and 50 percent exposure to defensive assets (cash and fixed interest).		
Growth The Growth risk profile is designed for investors with a minimum seven-year timeframe or those who are willing to accept higher levels of investment value volatility compared to more defensive options in return for higher potential investment performance. Some exposure to interest bearing assets is still desired, but the primary concern is a higher return, hence the 70 percent exposure to growth assets (shares, listed property and infrastructure).		
High Growth The High Growth risk profile is designed for investors with a minimum nine-year timeframe or those who are willing to accept high levels of investment value volatility in return for high potential investment performance. The 85 percent exposure to growth assets (shares, listed property and infrastructure) means that capital stability is only a minor consideration.		
Aggressive The Aggressive profile is designed for investors with a minimum ten-year timeframe or those who are willing to accept very high levels of investment value volatility to maximise potential investment performance. The 95 percent exposure to growth assets (shares, listed property and infrastructure) means that capital stability is not a consideration.
